

Revenue Intelligence & KPI Reporting

Power BI · SQL · Python · Sales Analytics · Business Intelligence

769M Total Revenue	3,835 Transactions	19,150 Units Sold	Apple Top Brand (21% share)	Delhi Top City (26.5%)	3.69★ Avg Rating
---	--	---	---	--	--

Business Problem & Objectives

A mobile device retailer operating across multiple Indian cities needed structured analytics to move from gut-feel merchandising decisions to data-driven sales strategy. Revenue data existed in spreadsheets but was never systematically analyzed for trends, segment performance, or growth drivers.

Business Question	This Project Delivers
Which brands drive the most revenue?	Brand performance ranking with market share %
Which cities are the strongest markets?	City-level revenue analysis across all transactions
How is revenue trending year over year?	YoY growth analysis: +345% (2021→22), -3.3% (2022→23)
Which customer age segments buy most?	Age group revenue breakdown — 46–60 leads at █249M
What payment methods do customers prefer?	UPI leads at █202M, nearly equal split across four methods
Which models generate the most revenue?	Top 10 model revenue ranking with iPhone SE at #1

Key Findings

Category	Finding	Business Implication
Apple leads with 161.6M (21.0% share) — market is highly fragmented, single brand only 21% at present		Most diversification is correct strategy
Chennai alone contributes 203.9M (26.5%) — 2x Mumbai (127.2M)		Requires dedicated sales team and marketing budget
Revenue grew 34.5% from 2021 to 2022, declined 3.3% in 2023, declined 2.2% in 2024 (partial 2023-24 decline needs investigation)		
Age Segment 46-60s group generates 249.5M — highest of any segment		Segment/flagship devices should target 46–60 buyers
UPI Payments (202M) but all 4 methods nearly equal — no single method dominates		Options remain available; no method to deprioritize
iPhone 15 Pro at 59.6M — mid-range Apple outsells all flagship Samsung models		Mid-range Apple plays outperform flagships; stock accordingly

Business Recommendations

Priority	Recommendation	Action	Revenue Impact
■ 1	Investigate revenue decline (2023-24)	Analyze pricing, market conditions, and product mix	Protect ■50M+ at risk
■ 2	Expand Delhi market	Open new store, increase inventory capacity, dedicated sales staff, and local marketing	Capex incremental ■20–30M
■ 3	Target 46–60 age segment	Optimize Flipkart/Samsung flagship bundles for high-value segment	■15–20M upsell potential
■ 4	Expand into under-served cities	Launch in Chennai, and Rajkot each at ■27–31M — growth potential	Combined ■50M+ addressable
■ 5	Stock mid-range models more aggressively	Since Galaxy S21 (#5) outperforms Galaxy S21 (#5) — demand is high	Prevents stockout revenue loss
■ 6	Build UPI-first checkout	Roll out payment at ■202M; streamlined checkout improves conversion	2–3% conversion improvement
